

videostreamingplatform — Observability Tech Stack (current state)

LOCAL — docker-compose

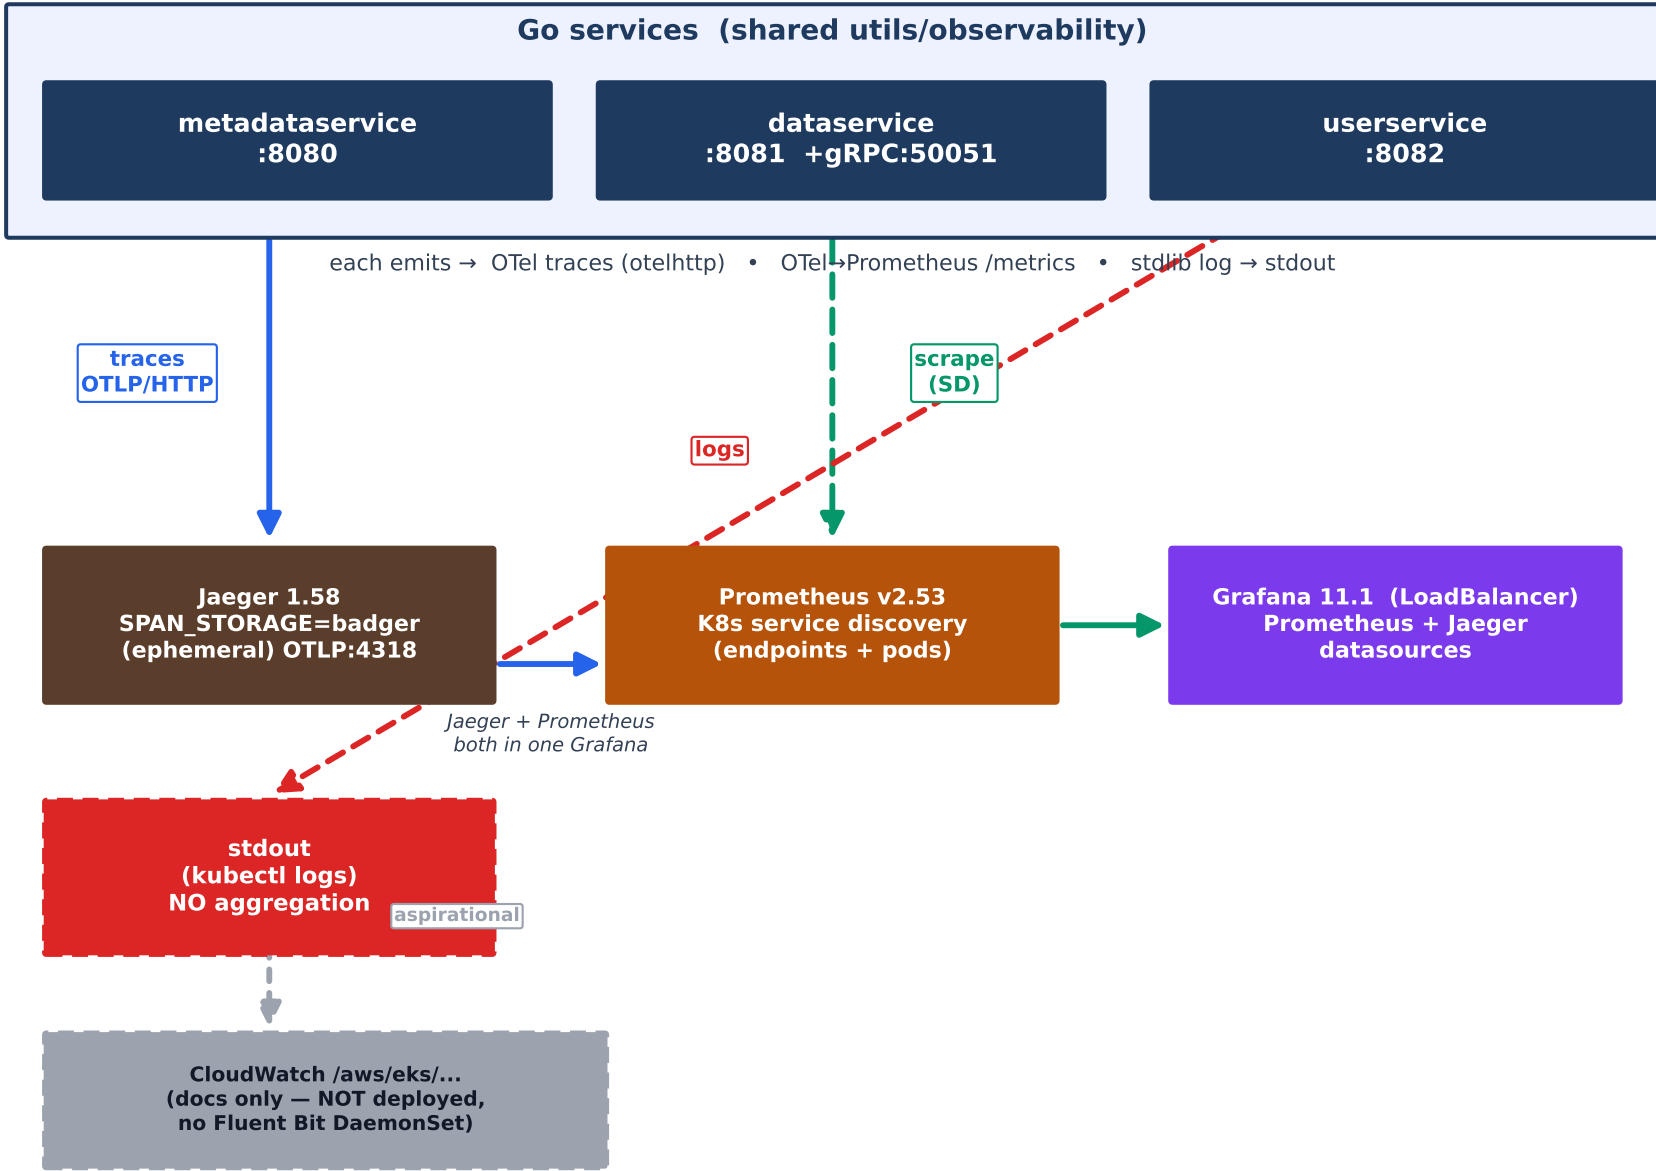

build/docker-compose.yml + scripts/

Traces viewed in Jaeger's own UI (:16686) — not wired into local Grafana

AWS — EKS (namespace: observability)

k8s/aws/manifests/observability/

— Traces (OpenTelemetry → Jaeger) — Metrics (OTel→Prom exporter, pull /metrics) — Logs (stdout only — WEAK / no aggregation) — Planned / not deployed

No Loki / Promtail / Fluent Bit anywhere. Metrics ✓ and Traces ✓ have real backends; Logs are ephemeral, unstructured (no JSON), and not trace-correlated in the Go services.
